

When You're Smiling, Success Smiles Upon You

Don't let an unattractive smile hold you back.

In business, your appearance often speaks before you do. Whether you're a public figure, or you conduct your business one-on-one, there's almost nothing more important than a good first impression. If you feel your smile is holding you back, maybe it's time to look into what Invisalign can do for you.

Having straight, healthy teeth can give you the confidence you need to show the world a big, beautiful smile. A healthy smile that may help open the doors to a new partnership, a relationship, or simply a pleasant meeting.

As we get older, our teeth tend to shift and often become crowded. This is a common problem for many adults. As a result, it becomes more difficult to keep teeth clean and healthy. Not to mention show the world a big smile.

Invisalign is made to fit your lifestyle.

Straightening your teeth with Invisalign can correct that crowding and help you maintain your dental health. It can also help you get that smile you've always wanted. Invisalign treatment is a breakthrough technique that straightens your teeth without braces, using a series of clear, comfortable aligners that are custom-modeled to fit your teeth. You graduate to a new set of aligners about every two weeks, and your teeth are gradually repositioned into a winning smile.

- Clear, comfortable, virtually invisible aligners
- No metal or wires to get in the way of your activities
- Easy to remove to eat, brush, and floss

Treatment time can be comparable to that of traditional braces. It varies, depending on your needs, but Invisalign often works in less than a year. Invisalign is generally covered by orthodontic insurance, and can cost about the same as traditional braces. It is also generally eligible for reimbursement under Flexible Spending Account plans.

Invisalign. It's never too late for a beautiful smile.
